

# BREAKTHROUGHS — IN — TECHNICAL ANALYSIS

NEW THINKING *from the*  
WORLD'S TOP MINDS

Edited by **DAVID KELLER**

## TRADING STRATEGIES FROM THE WORLD'S TOP TECHNICAL ANALYSTS

More than ever, traders, fund managers, analysts, and investors are using technical analysis to make trading decisions. Often these professionals struggle to identify the most effective technique to use and when and how to apply it. David Keller invited ten of the world's top technicians to explain what really works and why. In *Breakthroughs in Technical Analysis*, these widely respected practitioners describe their novel trading methods and how to use them for forecasting the future price direction of stocks, futures contracts, indexes, and many other financial instruments.

Presenting their knowledge of groundbreaking approaches—in some cases for the first time in print—are such respected names as:

- **Tom DeMark** shows when and why investors should use his market-timing techniques TD Combo™ and TD Sequential™.
- **Bernie Schaeffer** offers his options-based technical indicators for stock trading.
- **Robin Griffiths** presents his ten commandments for trading.
- **Nicole Elliott** breaks down Ichimoku Kinko Hyo, a traditional Japanese technique, to measure the strength of a trend.
- **Ted Hearne** discusses Drummond Geometry as it applies to the foreign exchange markets.
- **Constance Brown** reveals the formula behind her unique indicator, the Composite Index.

The techniques in this book have been the key to success for the experts who present them, and they can become just as valuable to any market professional who learns them. No matter which market you trade in, their use can help you broaden your approach as you incorporate them into your own successful investment strategy.
